EXPERIENCE

Strategic Planning

- Developing, championing, and enforcing short-term and long-term information technology strategy.
- Strategic planning of business growth objectives including setting up new policies and standards.
- Selecting and implementing suitable technology to streamline all internal operations and help optimise their strategic benefits.
- Addressing the disconnect between IT and internal business units by transforming IT into a consultative force that encourages collaboration while developing long term growth strategies.

Project Management

- Directing planning and project management of multiple strategic initiatives including selection and implementation of systems innovations or replacements, infrastructure improvements, risk management, data security and privacy controls.
- Project planning, software negotiations, software development, team-building, and rapid project implementation.
- Managing all departmental information technology projects and working with Project Managers on goal attainment.

Change Management

- Creating actionable deliverables for the five change management levers: communications plan, sponsor roadmap, coaching plan, training plan, resistance management plan.
- Applying a change management process and tools to create a strategy to support the adoption of the required changes.
- Applying a structured methodology and leading change management activities.
- Conducting impact analyses, assessing change readiness and identifying key stakeholders.
- Defining and measuring success metrics and monitoring change progress.

Systems Development

- Developing customer service platforms as well as internal personnel management systems.
- Implementing rigorous development and testing processes to decrease software defects.
- Designing and leading the development and implementation of business intelligence solutions.
- Improving software development process, upgrading servers and establishing consistent hardware and software standards to eliminate unstable, highly mixed operating environment.

Information Technology Management

- Maintaining the organisation's effectiveness and efficiency by defining, delivering, and supporting strategic plans for implementing information technologies.
- Directing technological research by studying organisation goals, strategies, practices, and user projects.
- Preserving assets by implementing disaster recovery and back-up procedures and information security and control structures.
- Recommending information technology strategies, policies, and procedures by evaluating organisation outcomes, identifying problems, evaluating trends, and anticipating requirements.

Human Capital Development

- Planning the implementation of new systems and providing training to IT professionals and other staff within the organisation.
- Leading full talent cycle programs across the company, to include onboarding, learning and performance management initiatives.
- Designing, developing and delivering blended training solutions for both groups and individuals.
- Devising and implementing efficient training and development strategy to fast-track onboarding of new employees.
